

TECHNOLOGY OVERVIEW GUIDE

ON-DEMAND

INTRODUCTION

Welcome to Vigil Security Systems,

I want to thank you for considering Vigil Security as your resource, partner, and supplier. I want to provide you with a brief overview of who I am, our vision, and the value we can offer to you and your organization. I have assembled a power team to serve you with absolute excellence and professionalism and I believe that you will be very impressed with the vision and efforts that we have worked together to create.

I have been a security expert for over 18 years, not including the nine years of military service during the Persian Gulf war. I have worked together with law enforcement and high-level security agents worldwide, helping to secure large scale events and venues such as the Olympic Games, FIFA world cups, and Pan-American games. Also, I have worked directly with 70 percent of the NBA/ NHL arenas across the United States and Canada. In addition, I have worked with more than half of the NFL Stadiums in the United States. Besides these experiences, I have provided enhanced security measures and technologies for airports, casinos, schools, universities, police departments, courthouses, prisons, and many others.

Throughout all of my many years working in security, I have personally experienced the urgency and difficulty to stay ahead of criminal activity and terrorism. I have felt the desperation experienced by law enforcement and the security community to protect lives every day.

I have always had a desire to join law enforcement and the security community in the fight to deter, detect, and defend against criminal and catastrophic events and I created the opportunity with Vigil Security Systems. Based on my experience and a deep desire to serve and protect, I chose to create Vigil Security Systems to feature unique approaches to providing security solutions to my clients. My team and I pledge to be experts in our security field, providing the most advanced security systems and deploying our solutions with the most professional and cost-effective services. Vigil Security Systems chooses to work with and represent only those manufacturers that provide the highest quality and most advanced systems in the industry. These companies invest heavily in research and development, have a full roadmap of features and enhancements to ensure that our customer investment does not become obsolete over a short period. Finally, we only offer solutions that integrate with other systems and provide open platforms so you and your team can customize your solution any way you choose and don't lock yourself into just one system.

Vigil Security's operation is very lean and efficient. We avoid costly markups by avoiding multiple distribution models and obtaining the best pricing directly from our manufacturers, which allows us to transfer cost-saving solutions and services to our customers. We provide superior deployment and ongoing maintenance services, and we consider ourselves to be experts in the security technology field. We are security specialists with technical experts ready to answer all of your security challenges with confident professionalism. We respond with urgency and commitment on every level because we understand that time is of the essence when it comes to your security operation. Our dedication to you and your team will be evident from day one.

I look forward to working with you and your team.

Give us a call at 817 891-4994 or email us at info@vigilsecuritysystems.com

1 24/7 SOFTWARE INTRODUCTION

27/7 Software the most powerful incident and management software

Demo
[Click here](#)

2 INCIDENT MANAGEMENT SYSTEM

Access and retrieve every detail of an incident, report or statistics; days, weeks, months or even years later. All details of an incident is immediately captured and stored from multiple locations and multiple users. These include texts, emails, photos, video, audio, witness statements, report forms, and real-time status and response times associated with the incident.

Demo
[Click here](#)

3 TEXTING MODULE

Empower your customers, employees, and visitors to provide feedback and updates in real-time to your operations team, providing your staff the necessary text communication tools to respond quickly. Answer questions, resolve incidents, and handle requests as they are reported

Demo
[Click here](#)

4 MAINTENANCE MANAGEMENT SYSTEM

Manage and control maintenance requirements and increase operational efficiency.

1. Create a web-form and let your vendors submit work orders for approval.
2. Create, track, edit, and automatically communicate work orders.
3. Create a chain for approvals based on the type of order and cost amount.
4. Create checklists to give you ultimate control of asset maintenance.
5. Track in calendar format with drag and drop ability to change dates.
6. Inventory real-time system alerts to restock materials
7. Create 1-click reports, charts and graphs.
8. Receive vendor insurance and warranty expiration alerts.

Demo
[Click here](#)

5 CHECKPOINT GUARD TOURS

No special hardware or wands required. Attach Barcode labels on any location or any piece of equipment and use the cellphone app to perform the tour.

Demo
[Click here](#)

6 TEAM TASK MANAGER

Execute operational tasks efficiently. Supercharge your operation by increasing staff efficiency and enhance performance. Track, communicate, and efficiently manage tasks, so nothing gets missed or falls through the cracks. Create tasks for daily operations or specific events. Send task reminders via text, email, and mobile app to the staff, so they have a record of their tasks.

Demo
[Click here](#)

7 ACTIVITY TRACKING

Track important operational activities and communicates activities such as shift changes, lunch breaks, meetings, briefings, patrols, and access requests. Pre-assign activity types to respective departments, prioritize activities by importance run activity reports to ensure staff are accountable and getting things done.

Demo
[Click here](#)

8 LOST AND FOUND MANAGEMENT

Enhance customer experience and build guest loyalty. Found items will be matched. Allows your guests to report, search, and claim their lost items directly from your website. Reduces the number of phone calls and staff hours to handle lost and found items. Eliminate the storage chaos by tagging found items, ensure that the correct item goes to the proper owner, create reports, analytics, and inventory summaries to account for all items in your Lost & Found storage – know what it is and how long it's been there, so you can decide what to do with your unclaimed items.

Demo
[Click here](#)

9 CUSTOMER REQUEST MANAGEMENT

Tracks and communicate customer requests separately from other incidents which allows the focus on critical incidents and never overlooking customer requests again. Quickly handle incidents as they are happening.
